The revolution

The information revolution

Time to reach 100m users in months.

Mobile phone - 192

Internet - 84

Facebook - 54

ChatGPT - 2

Large Language Models

ChatGPT is an application powered by Large Language Models.

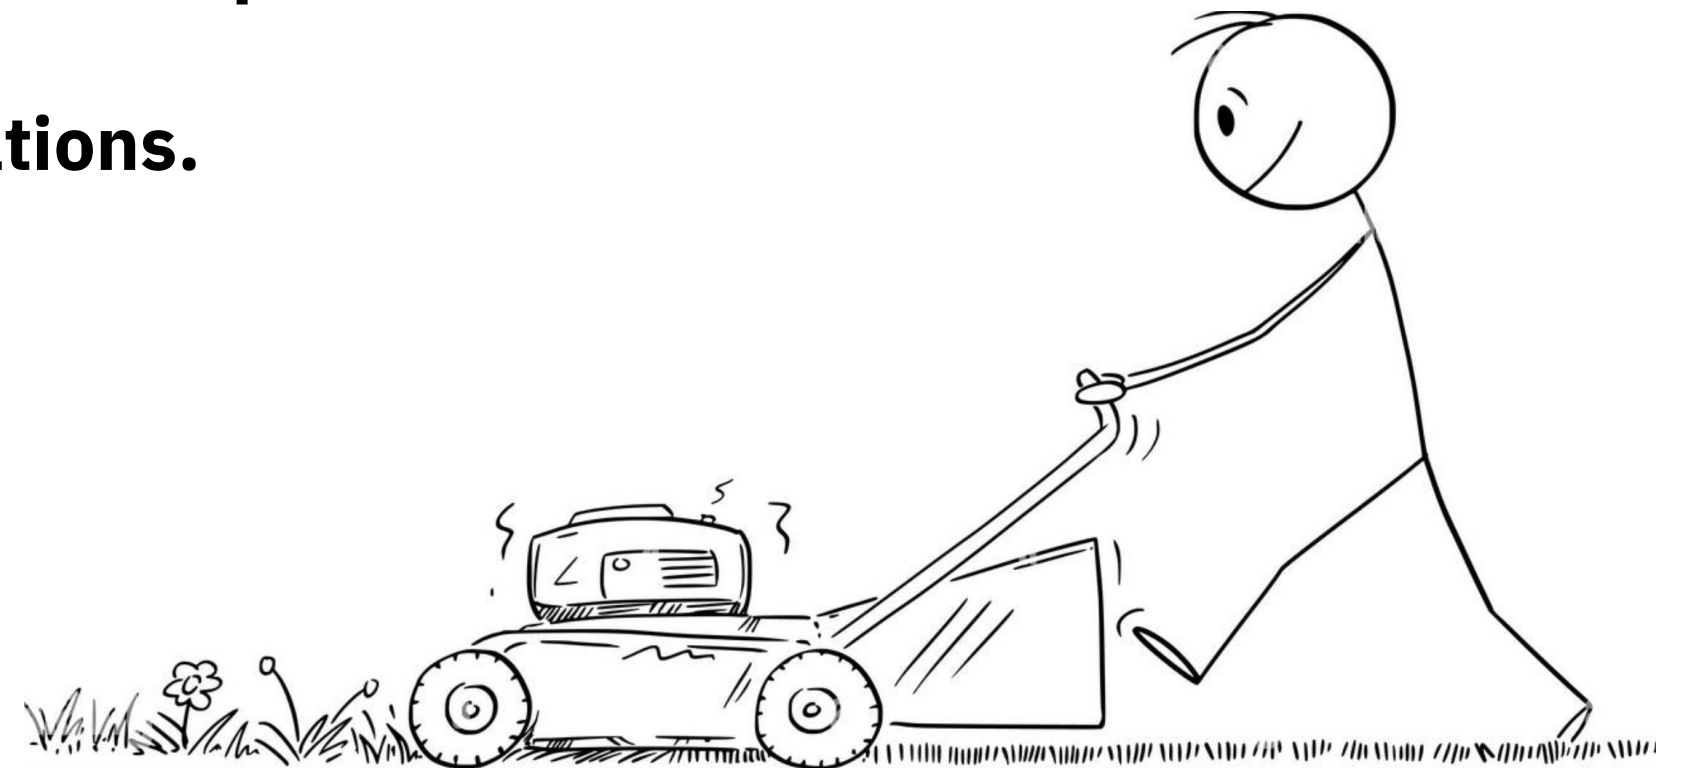

It's application is conversations.

A large language model is like the internal combustion engine.

Cutting your grass, digging a hole or getting you to the shops.

It's a specific technology and it has loads of applications.

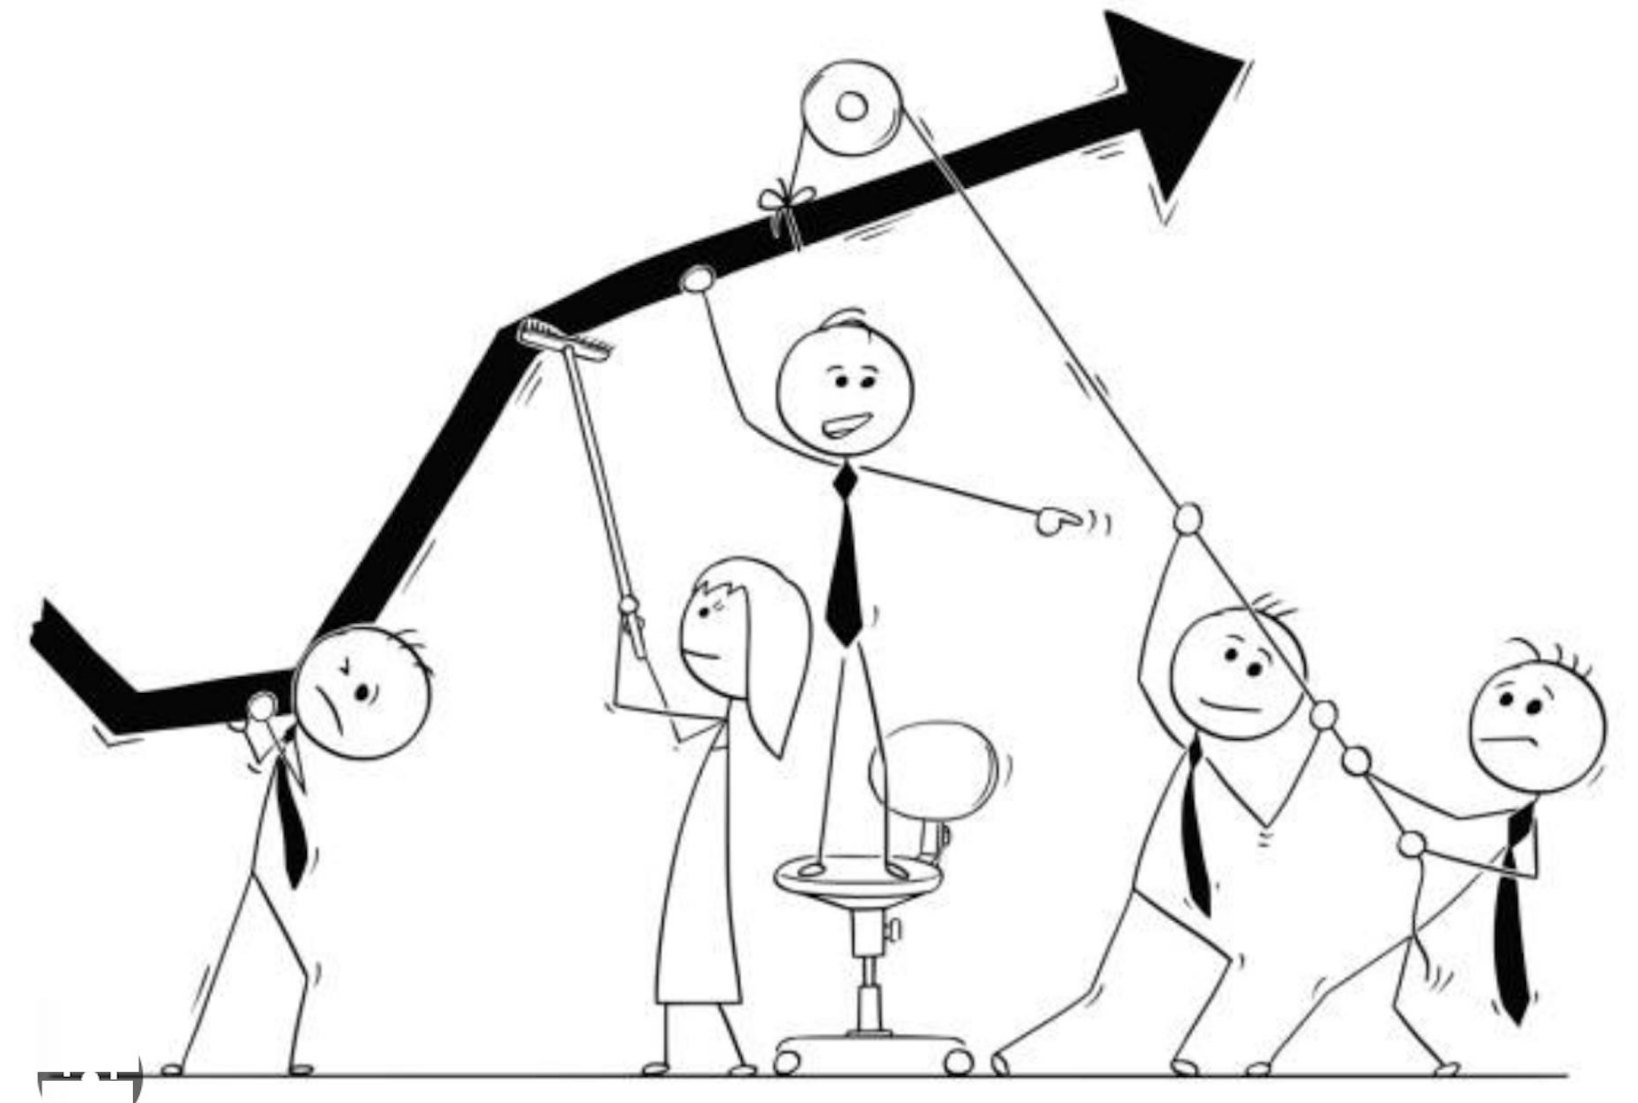

And we're only just at the start.

One such application

Language models read and write faster than humans.

Where could we apply this technology in construction?

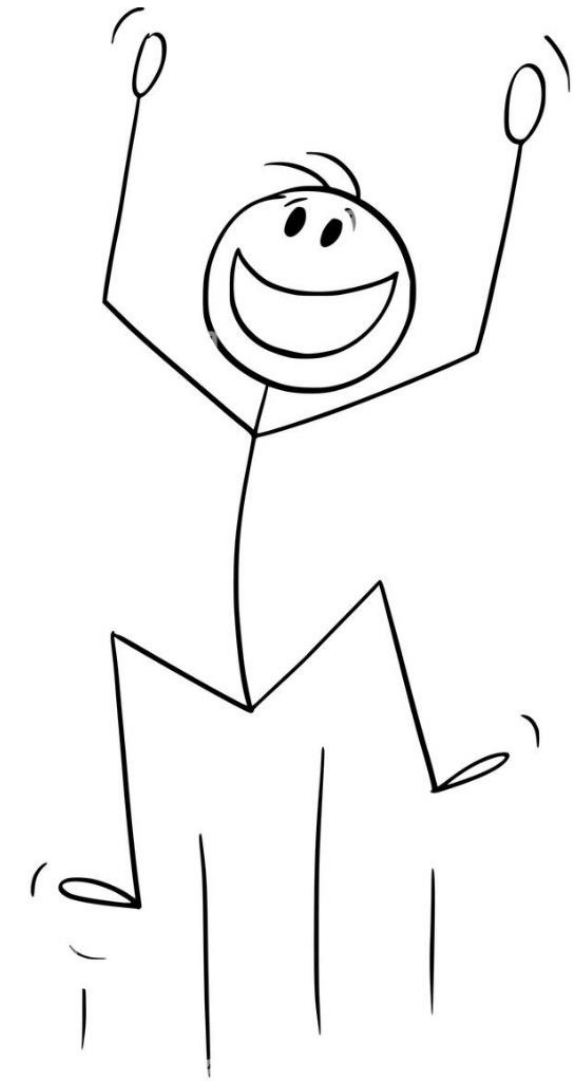

The Problem with Bidding

Bidding is brutal.

If you're not first, you're last.

Second place doesn't count.

The revenue and accolades go to your direct competitor.

Dig a hole

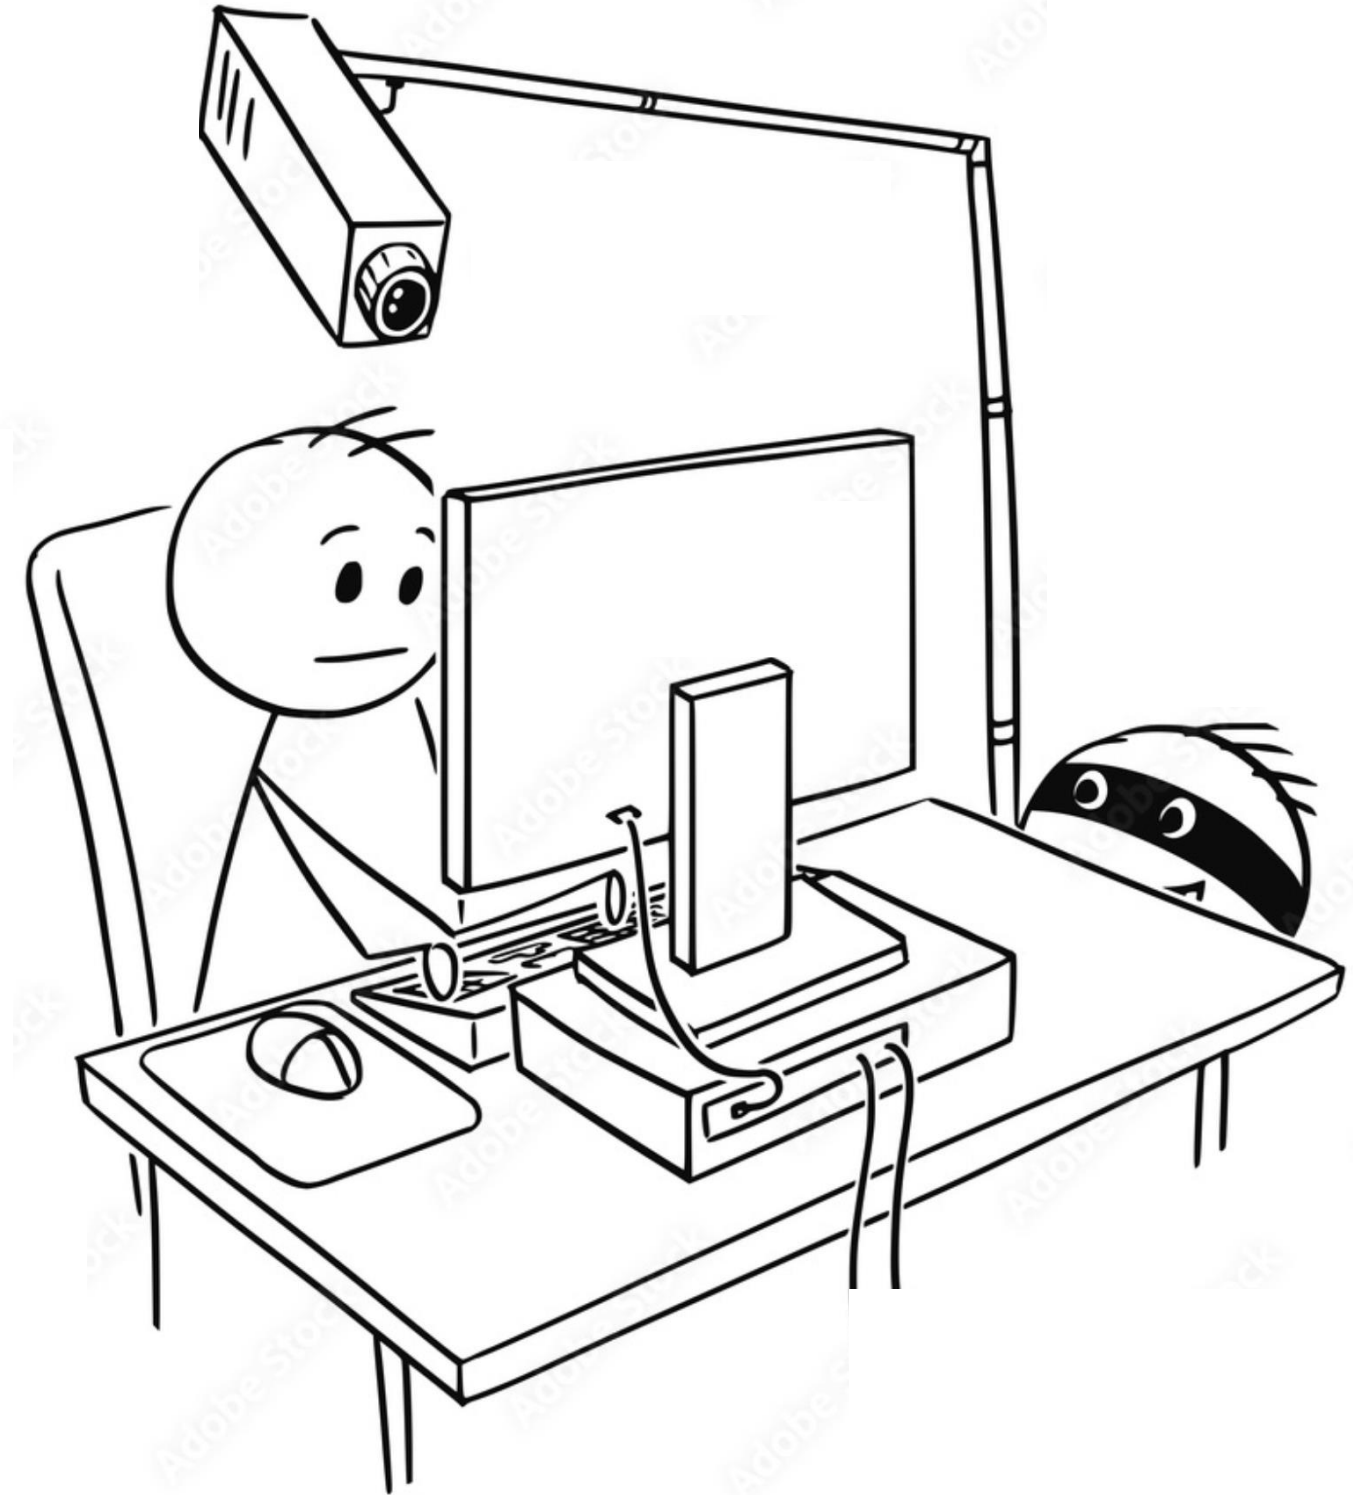

Digging yourself (out of a) hole.

First. Best. Safely.

Risks

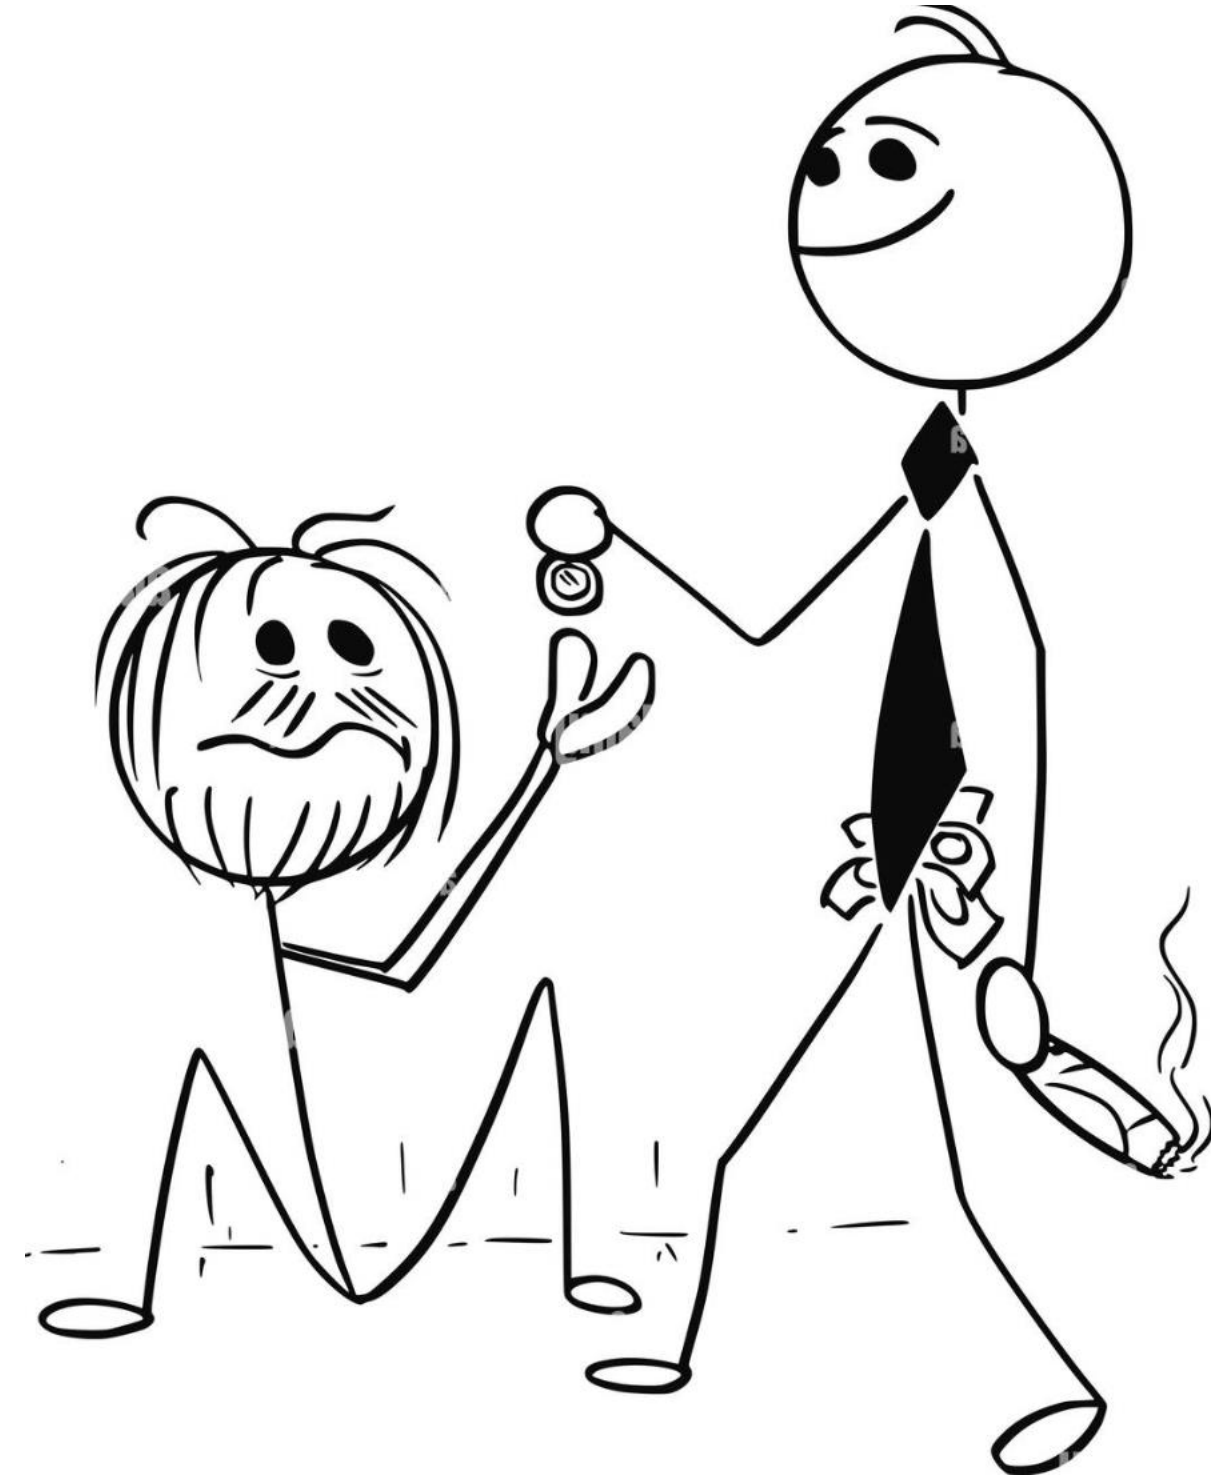

Data privacy and security.
Hallucinations.

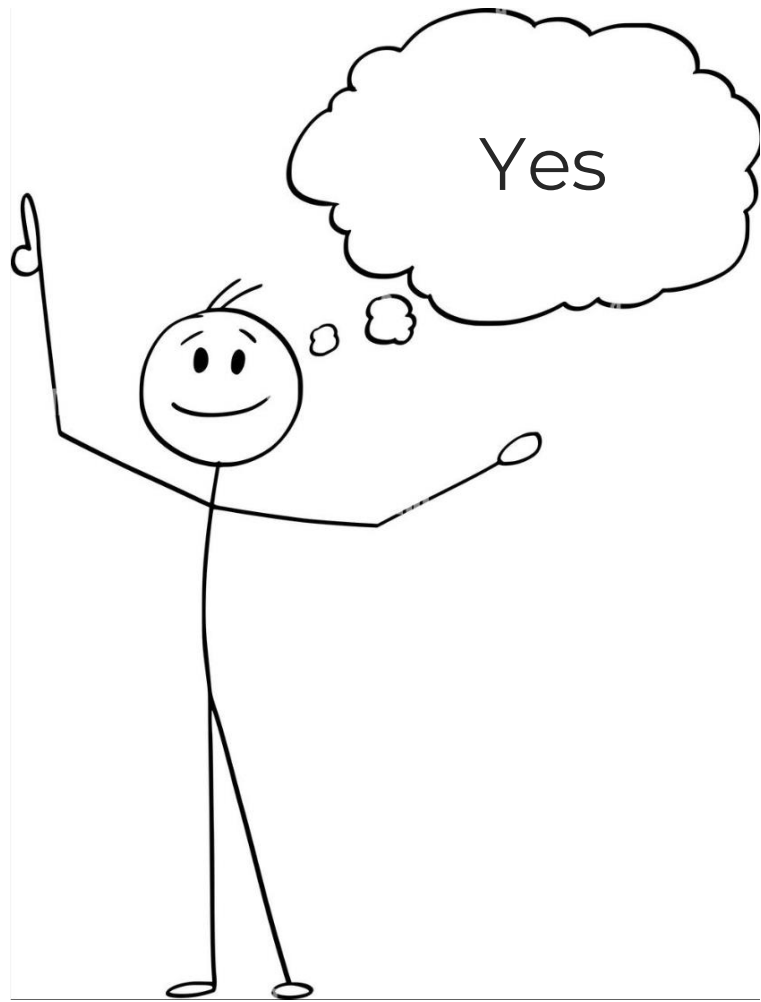

RAGs to Riches

Retrieval Augmented Generation.

Accurate, truthful and trustworthy content.

End to End

The outcome

- Reduce bidOpEx by 50%
- Increase win rate by 30%
- Speed up drafting time by 70%
- Save 85% of knowledge management time
- 8x productivity

Finally

Thank You
